

SENTRINEL

Next-Gen Facility Security

**Your Visitor
Management Ends
at the Gate.
Our Visibility
Doesn't.**

The Problem Isn't Knowing Who Entered but It's Knowing What Happened After.

Core Security Gap

✓ **VMS Answers:** "Who came in?"

✗ **VMS Misses:** "Where did they go?"

Without continuous visual tracking, approved guests become unmonitored security risks.

Major Security Vulnerabilities

- **Insider Threats** from unmonitored guests
- **Corporate Espionage** in sensitive areas
- **Unauthorized Access** to key assets

The Current Visibility Gap in Visitor Journeys

Visitor Registration: Logged at front desk

Known Entrance: Turnstile / lobby access verified

Verified Lobby: Present in reception area

Recorded Elevator: Enters elevator bank

Visibility Lost

Floor Exit: Did they exit on the approved floor?

Restricted Area: Wandering near server rooms or suites?

Facility Movement: Time in facility completely untracked

Meet the Layer Missing from Traditional Visitor Management

The Intelligence Workflow

Transforming CCTV & ACD Infrastructure

Integrating CCTV feeds with ACD shifts security from **passive recording** to an **active, real-time** visitor management workflow.

One Visitor. One Continuous Visual Trail.

Enriched Session Intelligence

Every timeline event is automatically linked to 5 core metadata attributes: **Exact Timestamp**, **Camera Feed**, **Location**, **Access Event**, and **Visitor Identity Session**.

Access Should Follow the Visitor's Purpose.

Access Control Integration Profile

 **Visitor Profile:** John (IT Vendor)

Authorized Zones (✓)

- ✓ Main Lobby
- ✓ Floor 5 General Area
- ✓ Meeting Room 501

Unauthorized Zones (✗)

- ✗ Primary Server Room
- ✗ Finance Department
- ✗ Security Control Room

Automated Incident Triggering

 Path deviations trigger instant alerts. Unauthorized access attempts immediately register security events.

ACCESS DENIED Target: Primary Server Room

 **Auto Response:** Instant CCTV pop-up sent to terminal.

 **VVMS auto-pulls live CCTV feeds** for immediate visual context, **eliminating manual archive searches.**

When Access Control Meets Video Intelligence

By fusing access policy with video analytics, we create a continuously verified security environment.

A dark blue rectangular panel with a blue border. At the top center is a white icon of a credit card. Below it, the text 'POLICY LAYER' is in white. The main title 'Access Control' is in large white font. Below the title is the quote '"Are they allowed here?"' in white. At the bottom, a paragraph in white text describes the layer's function: 'Evaluates credentials, badge permissions, and entry rules to establish baseline authorization.'

POLICY LAYER

Access Control

"Are they allowed here?"

Evaluates credentials, badge permissions, and entry rules to establish baseline authorization.

A dark blue rectangular panel with a blue border. At the top center is a white icon of a video camera. Below it, the text 'SPATIAL LAYER' is in white. The main title 'Video Analytics' is in large white font. Below the title is the quote '"Are they actually here?"' in white. At the bottom, a paragraph in white text describes the layer's function: 'Monitors spatial telemetry and optical movement in real time against physical boundaries.'

SPATIAL LAYER

Video Analytics

"Are they actually here?"

Monitors spatial telemetry and optical movement in real time against physical boundaries.

A green rectangular panel with a green border. At the top center is a white shield icon. Below it, the text 'UNIFIED SYNERGY' is in white. The main title 'VOMS Synergy' is in large white font. Below the title is the quote '"We know who they are, where they are, and if they belong."' in white. At the bottom, a paragraph in white text describes the layer's function: 'Synthesizes policy permissions with live optical tracking into a single stream of verified truth.'

UNIFIED SYNERGY

VOMS Synergy

"We know who they are, where they are, and if they belong."

Synthesizes policy permissions with live optical tracking into a single stream of verified truth.

Operational Impact: This tri-layered framework ensures that borrowed badges, tailgating, and unauthorized wandering are instantly detected, visually correlated, and flagged for review.

Turn Security Events Into Actionable Intelligence

System Operational Cycle

01. Detect Anomaly → 02. Verify Visually → 03. Route Core → 04. Mobile Alert → 05. Context Response

Every Visitor Leaves More Than a Log

In the event of a security breach or compliance audit, standard visitor logs fall short. VVMS delivers comprehensive, tamper-proof historical evidence.

TRADITIONAL VISITOR LOG

▲ Basic & easily falsified data points

☰ Visitor Name

Handwritten, unverified identity

🕒 Time In & Time Out

Approximate manual timestamps

No movement history, zero video evidence.

VVMS CAPABILITIES

🛡️ Verified Identity

Biometric & badge authenticated

📍 Complete Movement Trail

Real-time location & floor tracking

📺 Attached Camera Evidence

Automated CCTV video clip bookmarking

THE VALUE PROPOSITION: COMPLETE AUDIT NARRATIVE

"Undeniable proof for swift incident resolution."

Visitor tracked from lobby entry at 09:02 to server room security alert at 09:32 with visual footage.

Built for the Security Ecosystem

VVMS acts as a centralized intelligence layer that upgrades security infrastructure without replacing existing systems.

VALUE PROPOSITION

Commercial Positioning for Facility Managers

- ◆ **Smart Intelligence Layer:** Integrates on top of cameras & door readers.
- ⚡ **Fast & Cost-Effective Implementation:** Maximizes legacy hardware ROI.
- 🔊 **Next-Gen Upgrade:** Track visitors without a total overhaul.

Unified Security Ecosystem Integration

✓ Creates a Unified, Impenetrable Security Ecosystem

SENTRINEL

SENTRINEL

See Beyond the Gate.

Video Visitor Management System

Know who enters your facility with absolute certainty.

Know exactly where they go throughout their entire visit.

Know instantly when they shouldn't be there.

SCHEDULE A MEETING

Book a Live Demo

Meet with our team to explore
SENTRINEL-VVMS for your facility.
